CMR107 is a three-phase asynchronous motor proper to be installed on bridge machines for cutting granite, marble or stone. The technical features and the choices of the adopted materials make this motor suitable for heavy duty applications and environments. As a matter of fact, the use of O-rings, V-rings, chromium-plated steel labyrinth and sealing gaskets between shields and housing, makes this motor IP65 totally protected against water and dust. It is available in three versions (2, 4, 6 poles). On request it can be supplied in two speed-version or with electromagnetic brake with unchanged overall length.

Clockwise rotation standard (left thread).  
Anticlockwise rotation on request.
